

HOW TO USE THIS TEMPLATE

1. Select the layer "ARTWORK GOES HERE" in the Layer menu of Adobe Illustrator
2. PLACE or PASTE your artwork directly to the layer indicated above ONLY!
3. Your artwork will automatically be masked by the outer limits of the disc size / outline shown below. What you see in that area is exactly what you will see when your artwork is printed to the disc.
4. You MUST leave at least 1/4 inch of BLEED which will allow us to make any last minute adjustments. Bleed means that the artwork is to extend 1/4" beyond the outer circle shown below AND 1/4" inside the inner circle shown below.
5. If you are unable to understand how to use this template, simply create one large circle exactly 116 millimeters in diameter and place your artwork within those bounds using Illustrator, Photoshop, or Indesign. The inner circle is the area of the disc art that is the center hole of the disc. No artwork obviously can be printed there. The inner hold is exactly 23 millimeters in diameter.
6. Be sure to EMBED any placed graphic.
7. Convert ALL of your type to OUTLINES under the Type menu in Illustrator or InDesign.
6. If you have a question, please call us!

LARGE HOLE ROM TEMPLATE
(Can be used for both Recordable and Glass Mastered Discs)
